ASSOCIATION

PLANTING GUIDE:

Planting:

Prepare fine seedbed well before planting.
Plant 75 x 25cm 1 seed/hole or 90 x 40cm seeds/hole
Apply basal fertiliser and cover with soil
Plant seed on top and cover maximum 5cm
For best result, plant early, with on set rain.

BASAL FERTILIZER:

Apply farm yard manure where possible. Apply at planting DAP (50kg/acre) + MOP (15kg/ acre) or 50kgs/ acre NPK 17-17-17

WEEDING AND TOP DRESSING:

Ensure maize field is free of weeds. Top dress at 6 leaves with UREA (46%N) (50kgs/ acre) and cover with loose soil. Best results are achieved when soil is moist.

POST HARVESTING HANDLING:

Maize cobs are stored best in maize cribs. After shelling, dry the grain well before storage, and preserve with insecticides/ fumigants.

Farm tip: MINIMUM TILLAGE

Prepare the holes 75 x 25cm well in advance, wait for rain, apply and cover basal fertilizer with little soil, plant 1 seed per hole and cover maximum with 5cm. spray the weeds with a glyphosphate based herbicide before the maize seedlings emerge.
