1/4 Acre
PACK

KAYONGO-GO

STRIGA

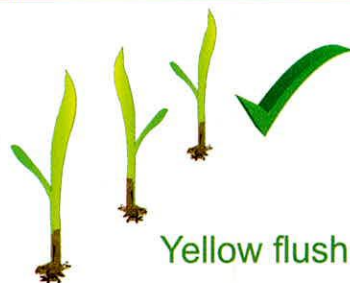

SAFE USE AND PLANTING INSTRUCTIONS

	 ADD DAP/NPK	 COVER WITH SOIL	 PLANT 3 SEEDS	 COVER WITH SOIL
Prepare seed bed (1/4 acre = 1000m²) Make planting holes at spacing of 75cm x 50cm	Soils should be moist at planting. Put one bottle top of DAP/NPK per hole and cover it with little soil	Plant 3 seeds of Longe 7H-IR Strigaway® per hole and cover with soil		
Tip: Save labour through minimum tillage, use selective pre-emergence herbicide to ensure a weed free field.	Tip: Where possible apply farm yard manure during land preparation.	Tip: Do not mix seed and fertilizer. Do not store seeds after opening		

Dispose off the bottle in a safe manner. Wash hands with soap and water after planting Longe 7H-IR Strigaway™

DO NOT plant non-IR seed before washing hands with soap.

At germination (after 7 - 14 days) the plant will be YELLOWISH, a sign that Strigaway™ is active. **DO NOT** uproot the yellow plants, within a few days, they will all be green.

		
Top dress with UREA/CAN at 6 leave stage (+/- 21 days after germination). Check and control stalk borers.	Ensure a weed free field and remove any remaining striga weed between the rows.	Store harvest in maize cribs. Control storage pests. Remember to always use NASECO Kayongo-Go maize
Tip: Do not put fertilizer near / on maize plants. Put fertilizer between rows and cover with soil.	Tip: To prevent any re-infestation, remove any visible striga plants before flowering.	Tip Plant either beans or Soybeans or Ground nuts as rotational crop (Legumes).
